PROFESSIONAL SUMMARY

Results-driven IT professional with expertise in Full-Stack Development and Backend Engineering using Python, Django, Django REST Framework, and PostgreSQL. Experienced in building scalable web applications, secure authentication systems, and AI-based job recommendation modules. Passionate about clean code, performance optimization, and delivering impactful technology solutions.

TECHNICAL SKILLS

- Programming: Python, HTML5, CSS3, Basic JavaScript
- Frameworks: Django 5+, Django REST Framework
- Database: PostgreSQL, MySQL
- Concepts: REST APIs, Authentication, ORM Optimization
- Tools: Git, GitHub, VS Code, Postman

PROJECTS

AI-Driven Workforce Matching System – Django, DRF, PostgreSQL

Developed a full-stack recruitment platform with role-based dashboards for employers and candidates. Implemented intelligent job-candidate matching logic and optimized backend APIs for performance.

Job Finder Web Application – Django, HTML, CSS

Built secure user authentication, separate registration flows, and responsive UI design. Integrated backend validation and error handling mechanisms.

EDUCATION

Bachelor’s Degree in Computer Science / Information Technology

Relevant Coursework: Data Structures, DBMS, Web Technologies, Artificial Intelligence

KEY STRENGTHS

- Strong problem-solving and analytical skills
- Clean and maintainable coding practices
- Scalable backend architecture design
- Effective team collaboration
